Projects

Title: Event manager pro ([Git link](#))

A **PHP** (codeigniter) based web application for event management with some dynamic features. The project has proper documentation and source codes. **Javascript**, **HTML**, **CSS** are used for front end and **MySQL** is used in backend.

Title: Covid-19 Tracker app ([Live link](#))

This project is build to track the latest update of Coronavirus pandemic. This application is basically a front end based app and build using **React JS**. Data is sourced using an API in JSON format. The app is hosted live using **Firebase**.

Title: Image editor ([Live link](#))

This project is for editing images online by using various filters and effects. User can drag & upload image & also can download the image after editing. This is a front end application. No database is maintained in the backend. A javascript library is used to complete the application.

Title: IoT prototype ([Live link](#))

Overview: This project was about creating a high-fidelity prototype using **Adobe XD**. A large amount of research and study is conducted based on interaction design theories to complete this project. A documentation is available for the project.
